

CHANNEL DRAIN MAINTENANCE SCHEDULE

Allproof channel drainage products including level threshold are designed with easy ongoing maintenance in mind.

Allproof recommend following the below steps to ensure optimum performance of drainage products:

Monthly

- > Wash down channels and grates with plenty of fresh water, remove any attached debris with standard household detergent mixed in warm water.
- > Any tea-staining can be removed by following the steps outlined in our Stainless Steel Maintenance Guide.
- > Inspect components for any wear or breakages.

Six monthly

- > Remove grates as required to flush the channels clean of debris. Remove this debris from the sump and dispose of.
- > Inspect outlet for operation/blockages.
